

Ethereum Certificate

Timestamp

Jun 12, 2026, 07:07:23 AM

Data Hash:

0x6c24dc584e4dd9d512079eb595afc5cccb4a5cd8221b022e8a5df2fac54fe60f

Blockchain Transaction Link:

0xca22f41a6caf54d403ecf1eb8c705ae6b9ee543de5346c8dd40ab8f1efeca313

Root Hash:

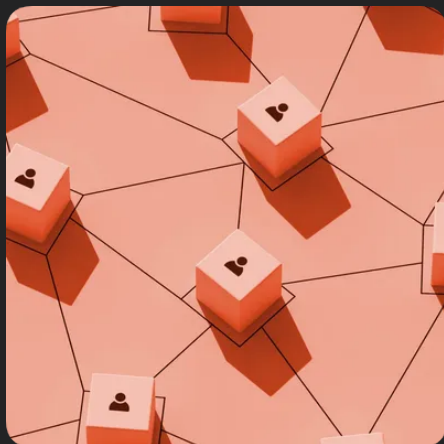

0xbd80158c14b360849cdae9959c4610b2366a2e45b5726ac177b2bcb002f408

This certificate is only valid in combination with the original file and OriginStamps open procedure.

VERIFICATION

OriginStamp creates tamper-proof timestamps by embedding a cryptographic fingerprint of your data into the blockchain. Your original files remain private and are never uploaded.

1. Generate SHA-256 Hash

Calculate the SHA-256 fingerprint of your original file using any standard tool.

2. Validate Proof

Open your proof file in a text editor and ensure it contains your file's SHA-256 hash.

3. Determine Root Hash

OriginStamp uses a Merkle Tree to aggregate multiple hashes into a single Root Hash. If the calculated Root Hash matches the one on the blockchain, the integrity is verified.

4. Locate Bitcoin Transaction

The Root Hash is permanently recorded in the Bitcoin blockchain within an OP_RETURN transaction.

5. Verify Timestamp

The block time of this transaction serves as the official, tamper-proof timestamp. Most blockchain explorers can be used to independently verify this entry.

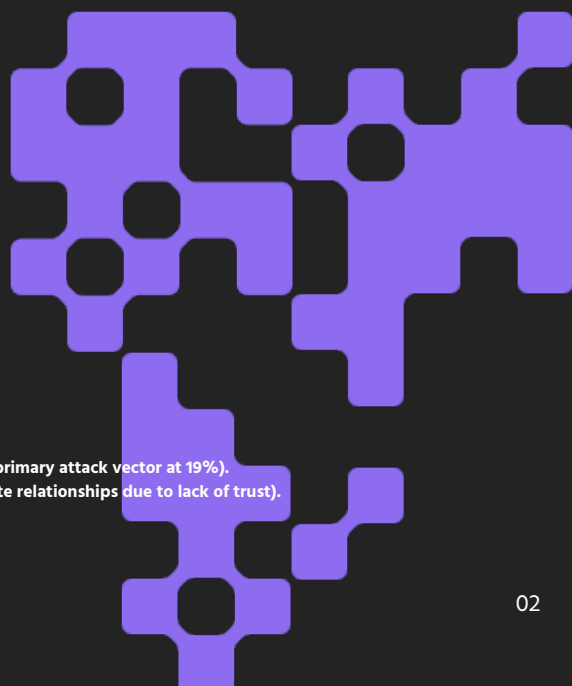

19%

of data breaches involve stolen credentials, requiring independent file verification.*

75%

of consumers avoid brands they don't trust with their data—integrity is key.*

1. IBM Security / Ponemon Institute: Cost of a Data Breach Report. (Stolen credentials remain the primary attack vector at 19%).
2. Gartner / Vercara Research: Consumer Trust in Data Privacy Survey. (75% of consumers terminate relationships due to lack of trust).
